

STORY ANGLES

Life in the Universe

By Marshall Vian Summers

A “GREATER COMMUNITY” OF INTELLIGENT LIFE

Hardly alone or isolated in the Universe, Earth is part of a Greater Community of intelligent life that spans across the cosmos. This Greater Community contains countless civilizations at all stages of evolution, technological ability and spiritual advancement. Though tremendously diverse and expansive, this community shares a common destiny and purpose in manifest life: to develop the deeper Knowledge, or gnosis, that exists in each individual and to foster relationship between individuals and even whole worlds in service to the greater plan and purpose shared by all sentient life. Also in this Greater Community is an ancient cause for freedom and spiritual development undertaken by a network of the wise in many worlds. This network of the wise seeks to educate and prepare humanity for its destiny in the Greater Community and open to humanity a greater set of relationships in service to a higher purpose and plan now in motion throughout the manifest universe.

EVOLUTION AND CREATION: BOTH PART OF GREATER PLAN

Life in the Universe presents a revolutionary perspective on the joined purpose of Evolution and Creation. In this revelation from Marshall Vian Summers, we learn that God has set in motion the forces of evolution as the means for creating a self-sustaining, regenerating universe. Could evolution simply be God’s plan for the created universe? The initial spark that set evolution in motion occurred billions of years ago and was done to enable humanity and countless other intelligent beings to grow and develop without the direct oversight of God. Here we learn that evolution is a key part of God’s plan for Creation.

GOD, CREATION AND COSMOLOGY

For thousands of years we have looked into the night sky, wondering if we are alone in the vast expanse of the universe. Are we at the center of God’s Creation? If the universe is replete with life, what does this mean about God’s plan for humanity as described in the holy texts and traditions of the world? Summers’ revelation *Life in the Universe* reveals that we are certainly not alone in the

universe and details that moment of Creation where, at the inception of time, a master intelligence offered form and separation to all who desired it.

THE FORCE: BINDING TOGETHER ALL LIFE IN THE UNVERSE

Marshall Vian Summers' revelation teaches about the existence of an unseen force that binds together all life in the universe. Summers calls this "Knowledge," a deep presence in the individual which manifests in profound insight, selfless action and purposeful relationship. This inner knowledge, or gnosis, is present in all sentient life and can be experienced and shared between individuals of different cultures, nations or even worlds. This is truly the force that binds us with all life in the universe and infuses into our individual lives and relationships the greater plan and purpose which is being experienced at all ends of the cosmos.

A TRUE JEDI RELIGION

Summers' new book teaches of an ancient spiritual tradition practiced throughout the universe which we can now put into real practice in our lives today. "Greater Community Spirituality" is a universal spirituality emphasizing inner-knowledge and a rich set of spiritual practices we can use to elevate our own mental condition and aid the preservation and protection of humanity and the Earth. Practicing this new form of spirituality connects us to the evolutionary flow and direction of life throughout the cosmos. Through this, we become part of a vast plan being undertaken in many worlds to advance the cause of freedom and self-realization throughout the universe.

THE UNFOLDING NARRATIVE OF LIFE IN THE UNIVERSE

Summers' new book chronicles the recent developments in our region of space and how these and other forces already in motion will effect us and our life on Earth. Do we live in a sparsely populated region of space or at the crossroads of trade and travel? Who is around us, what are they like and what will happen when we make contact with them. All these questions and more are deeply addressed in *Life in the Universe*, a revelation that Summers claims has come from the Creator to prepare and educate us about what we could otherwise never know.

WHAT IS LIFE IN THE UNIVERSE REALLY LIKE?

Life in the Universe details the interactions, trade and travel of intelligent life beyond our world. These fascinating revelations speak to the interest of many people. Where else can we gain a clear picture of life beyond our world? How else can we pinpoint humanity in the greater story now unfolding amongst advancing worlds in our region of space? How do advanced civilizations order their societies? What is the nature of diplomacy, interaction and conflict between worlds? *Life in the Universe* reveals the answers to these questions and many others. Through this revelation we are being given a window through which to watch the greater movements of life and interaction now occurring beyond the edge of our solar system.
