

INTERVIEW QUESTIONS

Out of Place in Time and Space

By Lamont Wood

- What is the book about?
- Is there a name for these phenomena?
- Can they be explained?
- Do you have a favorite anachronism?
- You're saying that the Jules Verne predicted the Apollo Program a century in advance?
- How did he predict what he did?
- Your book has a number of examples of people making accurate predictions about the future. Did any of them profit from their prophecy?
- Is it true that there are medieval and renaissance church paintings that show flying saucers?
- You reject medieval flying saucers, but the book also says that the moons of Mars could be artificial satellites. Aren't you being inconsistent?
- So who built them?
- Are there other things in the book that simply can't be explained?
