

PRAISE FOR:

The Aztec UFO Incident

By Scott Ramsey, Suzanne Ramsey, and Frank Thayer

“The authors have done a superlative job of documenting the crash and recovery of an alien spacecraft in Aztec, New Mexico, in March of 1948. Their three decades of investigation, supported by countless interviews and more than 55,000 pieces of documentation, leaves no doubt in the mind of even the most discriminating reader but what a disc was recovered by the U. S. Government, at the dawning age of ufology. This is a compelling book that should be read by anyone interested in the UFO phenomenon, and in what our government knows about the alien visitation of our planet!”

—PETER B. DAVENPORT, Director, National UFO Reporting Center

Nearly three decades of painstaking field research focused on witness, documentary and physical evidence examination has led Scott and Suzanne Ramsey and others involved in this research project to the inescapable conclusion that on March 25, 1948 — some nine months after Roswell — an extraordinary event of historic proportions took place at Hart Canyon near Aztec involving a crash landing of an otherworldly saucer-shaped craft with ‘dead’ alien occupants. However, it subsequently was quickly and successfully recovered and covered-up and officially stamped “hoax”, the witnesses were silenced and the sources who came out with the story underwent the classic ad-hominem attacks to discredit them publicly, so the HOAX explanation has stuck in most people’s and most researchers’ minds ever since. With this in-depth research book the Ramseys and their team wish to share their efforts and the (new) evidence uncovered with the public at large and the skeptical researchers so that they can draw their own conclusions based on actual evidence coming from the horse’s mouth. I believe the Ramseys have written the definitive book about the historic March, 1948 Aztec flying saucer crash landing. Reading their book has certainly changed my perspective on this case and I think it will certainly change other people’s perspective too, i.e. the ones who are open to rethink the whole case in a healthy and sensible manner. Don’t miss out on this authoritative with new evidence and revelations!

—ANDRÉ SKONDRAS, UFO Researcher, Belgium

“An excellent read with powerful information provided by Scott and Suzanne Ramsey.”

—TIMOTHY GOOD, UFO Researcher

Scott and Suzanne Ramsey have done more research into the Aztec Incident and updated their earlier book. I am still fascinated by the story and appreciate the additional information brought to light through their research into more government documents and interviews with eyewitnesses and their descendants.

Their documentation is excellent. They have listed the government agencies and the documents that have been released since their last book. They have also listed interviews done as well as radio programs and recordings. They have gone to primary sources when possible. They have done the traveling to prove the UFO at Aztec could have been removed using the roads and equipment available in 1948 and ensured they had the maps from that time.

Regardless of your thoughts, the Ramseys are persuasive in their arguments and can back them up with primary source documents. The book is well thought out. I enjoyed the first person point-of-view of the book. I feel like I am sitting on my back porch with my friends sharing a beer and listening to Scott and Suzanne Ramsey tell us their story. I am interested and fascinated by it.
