

INTERVIEW QUESTIONS

Visions of the Multiverse

Written by Steven Manly

- I thought the universe included everything. How is it we can talk about multiple universes?
- Multiple universes? That's science fiction, right? Your book says many scientists take the idea of multiple universes seriously. How is that? Has something changed recently to make this so?
- How many distinct concepts of the multiverse do you discuss in your book?
- Is there scientific evidence that the multiverse is real?
- What does the idea of multiple universes have to do with intelligent design?
- How is string theory "tied together" with the multiverse?
- Is there really a different universe out there where Elvis still lives?
- Can we choose which universe we are in, sort of like what is discussed in *The Secret*?
- Is it possible to travel between universes in the multiverse?
- Since, by definition, our universe has no causal connection with any of the other universes in the multiverse, isn't this more philosophy than science?
- What separates the universes in the multiverse?
- Is it possible to be in more than one multiverse at the same time?
